

“Exploring the Role of ICT in Occupational Performance Among Older Adults”

Masters Occupational Therapy student conducting research exploring the role that information and communication technology (ICT) plays in older adults’ ability to do the things that are meaningful to them. ICT can include computers, tablets or mobile devices.

Looking for: Individuals’ aged 60 and over who have recently started using ICT. This could include just one aspect such as emails or the use of a number of things through ICT.

What to expect if you choose to participate: If you wish to take part in this study, you will take part in a 1:1 interview with the researcher at an agreed venue, lasting approximately 45 minutes. During the interview the researcher will ask you questions about your experience of using ICT and how you feel this has affected your daily life and doing the things that are meaningful to you. Please allow 1 ½ hours in total as there will be 15 minutes before and 30 minutes following the interview for you to ask questions if you wish.

Please contact the researcher using the details shown below to arrange a time to meet.
